Engineering Change Request:	2021-0787	Date:	11 Jan 2022
-----------------------------	-----------	-------	-------------

Comments:	Change of material
-----------	--------------------

Affected products:	NAC3PX NAC3PX-SB NAC3PX-TOP NAC3PX-TOP-SB
--------------------	--

First shipment of modified product:	P02
-------------------------------------	-----

Engineering Change Notice

Due to major difficulties in procurement which would affect our delivery times, we decided to change the base material of above listed products from Frianyl V0 to Creamid V0. The base materials of both suppliers are polyamid 66 compounds and are practically identical. Internal tests and external certifications have shown that the product properties remain unchanged. The article numbers of the products remain unchanged. Traceability is ensured through the production code.

Product Change Notification - 2020/07

Product Line:	powerCON	Part No:	NAC3PX-TOP
Piece Part:	Housing	Part No:	91220791090 91220781
Engineering Change Notification:	2019-0186, 2019-0187	Date:	05.02.2020
Comments:	Design change		
Affected products:	NAC3PX-TOP		
First Shipment of Modified Product:	N03		

Engineering Change Notice

The breach in the chassis front was necessary to show the yellow logo (1). As the color of the back cover was changed from yellow to black, the logo is now black anyway, so the breach was removed and the logo is now embedded directly in the front cover (2). The big advantage of this change is the elimination of a tricky sealing point.

OLD

(1) Breakthrough of logo from the back

NEW

(2) Logo now embedded in the front
