

Improved Isoprobes and streamlined portfolio

Dear customer,

We thank you for your trust in our products and for choosing Stäubli Electrical Connectors as your supplier. As part of a comprehensive modernization of our Isoprobes in the field of test and measurement, we would like to inform you about upcoming changes of the Isoprobe II and III.

Our facelifted Isoprobe II and Isoprobe III will have a broader protecting collar. In addition the Isoprobe II will have the compensation capacitor protected by a piston slide, replacing today's turning button. The Isoprobe II will look as shown and highlighted here (the Isoprobe III accordingly):

With the facelifted housing we will also update the product portfolios of standard articles.

- The "Isoprobe II - 100:1" and rare variants of 10:1 will be discontinued.
 - The "Isoprobe III - 1:1" will be discontinued.
 - The HF versions of both Isoprobe II and Isoprobe III will be discontinued.
- Their respective ECO versions are adequate technical replacements.

Order numbers for Isoprobe II will change as shown in the attached table. Order numbers for continued Isoprobe III and for all customer specific probes in this housing will remain unchanged.

Last call for discontinued products is June 30, 2023.

Please use the **new article numbers of Isoprobe II** for all orders **after June 30**.

First deliveries of facelifted Isoprobe II, Isoprobe III and customer specific probes in this housing will start in April 2023. This may happen even if ordered with old order number.

From July 2023 onwards you will receive only the facelifted housings.

We thank you for your understanding and apologize for any inconvenience. Stäubli remains committed to meeting your needs with our high-quality, end-to-end new test and measurement accessories.

If you have any questions, please contact your local Stäubli sales representative.

Sincerely,

- Isoprobes:
